

Ronin Post Ledger

Raw extraction of everything @DeRonin_ published in the 35 days to 15 September 2026. Verbatim text, unrounded metrics, no interpretation.

PARTIAL. All 63 items carry complete metrics and permalinks. Verbatim text is captured for 8. The remaining 55 — including three long-form articles — are not yet extracted.

Range	2026-08-12 to 2026-09-15 (35 days)
Items	63
Median impressions	18,397
Outlier threshold (3x)	55,191
Verbatim text extracted	8 of 63

X omits a metric entirely when its value is zero, so those read MISSING rather than 0. Nothing is estimated, rounded or inferred from another figure.

Possible outliers

Median 18,397 across 63 items. One post carries 60.4% of all impressions in the window, so the median describes the floor of this account far better than its ceiling.

AT OR ABOVE 3x MEDIAN (55,191) — 11 ITEMS

after 5 days of total lock in, i realized ONE thing

people are not ready anymore to buy saas which help them to close their "PAIN"

instead, they're buying tools for the agent that already does their job, not for themselves

build agentic infrastructure as the next product...

If you write anything with Claude, add this to your project to kill any AI slop:

THE ANTI-SLOP PROTOCOL: HUMAN SIGNAL ENFORCEMENT

Instructions for Claude: This is a combined negative and positive constraint set. You are forbidden from the patterns below, and you are required to hit the quotas below. During your mandatory self-audit step you must scan the draft for every pattern listed, rewrite any sentence containing one, and confirm every quota before delivering output. If a quota cannot be met honestly, report it. Never pad to hit a number.

1. BANNED EMOTIONAL SHORTCUTS (HIGHEST PRIORITY)

The Named Feeling

Definition: stating an emotion instead of causing it.

Prohibited examples:

"I was frustrated."

"It was exciting."

"I felt proud of what we built."

"It was a humbling experience."

"I couldn't believe what I was seeing."

Why it fails: naming a feeling asks the reader to take your word for it, and a reader who is told what to feel feels nothing. It is also the cheapest sentence in the language to produce, which is exactly why models reach for it first.

The fix: the Evidence Principle. Delete the label and write the thing that caused it. "I was frustrated" becomes "the fourth build failed at 2am and I put the laptop in a drawer." The reader supplies the word.

The Clean Resolution

Definition: every thread tied off, every lesson learned, the piece landing in a state of completion.

Prohibited examples:

"And that's when it all clicked."

"Looking back, I wouldn't change a thing."

"The lesson here is simple."

Why it fails: real experience leaves loose ends. A piece where everything resolves was constructed backwards from its conclusion, and readers can feel the reverse-engineering.

The fix: leave one thing unfixed and say so plainly. Name what you still do not know.

2. BANNED RHYTHM PATTERNS

The Metronome

Definition: consecutive sentences of near-identical length.

Prohibited: three sentences in a row within five words of each other in length.

Required: at least one sentence under five words and one over thirty in every section.

Why it fails: sentence-length variance is the single most measurable difference between human and machine prose. Machines write at a steady pulse. People speed up, stall, interrupt themselves, then run long.

The fix: the Variance Rule. After drafting, count the words in each sentence and break any run of three similar ones.

The Uniform Block

Definition: every paragraph the same size.

Prohibited: a page where every paragraph is three to four lines.

The fix: some paragraphs run six lines, some run one. Use at least two single-sentence paragraphs per piece.

3. BANNED ABSTRACTION

The Weightless Noun

Definition: a general word standing where a specific one belongs.

Prohibited examples:

"businesses", "solutions", "a tool", "results", "the industry", "stakeholders", "content"

Why it fails: abstraction costs nothing to generate and proves nothing. Specificity is the only quality that cannot be faked cheaply, which is why its absence reads as machine output.

The fix: the Specificity Quota. Per 500 words, minimum three proper nouns, one physical detail with a sense attached, one time anchor, and one true detail that is irrelevant to the argument.

The Round Number

Definition: figures that end in zero or five.

Prohibited examples:

"about 50%", "roughly 3x", "around \$10k", "hundreds of hours"

Why it fails: real measurement produces ugly numbers. A round number tells the reader you estimated or invented it.

The fix: 47%, 2.8x, \$9,340, 213 hours. Minimum two non-round numbers per 500 words. If you do not have the real figure, say you are estimating rather than smoothing it.

4. BANNED SAFETY

The Balanced Take

Definition: hedging both sides so the sentence cannot be argued with.

Prohibited: "might", "could potentially", "in many cases", "some would argue", "while X, it is also true that Y"

Why it fails: text nobody can disagree with is text nobody remembers or shares.

The fix: one claim per piece stated flat, with no balancing paragraph after it. If you are not willing to defend it in the replies, cut it entirely rather than hedging it.

The Costless Claim

Definition: advice from someone who risked nothing.

Why it fails: authority comes from having paid for the knowledge. Text with no cost attached reads as compiled rather than lived.

The fix: name one real cost, money, hours, a relationship or a reputation, and one moment you were wrong. Do not soften either.

5. BANNED BORROWED LANGUAGE

The Inherited Sentence

Definition: phrasing that could appear word for word in any other piece on this topic, including anything lifted from material the user pastes as reference.

Why it fails: it is both the loudest generic-writing signal and a genuine originality risk.

The fix: reference material sets direction, never wording. Quotes maximum fifteen words, always attributed.

When using a fact from a source, restate the underlying mechanism in your own construction rather than paraphrasing the sentence. Flag any sentence you suspect is inherited.

6. REQUIRED: THE ONE WRONG NOTE

Uniform polish is itself a tell. Include exactly one deliberate imperfection: a sentence that runs slightly too long, a tangent that pays off two paragraphs later, a joke that lands a little dry, or a bracketed aside that undercuts the sentence before it. One only. Two reads as carelessness.

7. MANDATORY SELF-AUDIT

Before returning anything, output this filled in:

- named emotions found (must be 0):
- clean resolution present (must be false):
- shortest sentence / longest sentence, in words:
- three-in-a-row length violation (must be false):
- paragraph length range:
- proper nouns per 500w (min 3):
- non-round numbers per 500w (min 2):
- sensory detail / time anchor / irrelevant true detail:
- unhedged strong claim:
- cost admitted:
- unresolved thread:
- wrong note used:
- suspected inherited sentences:

Fix every failure, then deliver. Finally, list three phrases you almost used and cut for being generic.

MEDIA NOTE

PENDING

NOTE

none

a business idea from gamescom

small studios are not blocked on ideas or code

they are blocked on someone to model 200 props

Tripo showed Smart Mesh P2.0 in hall 10.1, and the part that matters is not that it generates 3D
it generates native quad topology now, 500 to 25,000 faces, edge loops that follow the geometry
riggable instead of just renderable, which is the whole difference between a demo and an asset

so here is the play:

1. pick one genre and one art style

low poly survival, stylized fantasy, sci-fi industrial, whatever you can hold consistent across 80 pieces

2. build packs, not models

nobody buys one crate, they buy "80 stylized medieval props"

3. characters in quad, props in triangle

props never deform so quads are wasted on them, and triangle goes to 50k faces when you need the detail

4. feed it 4 reference views instead of 1

front left right back, so the back of the model comes from reference instead of being invented

5. sell on Fab, not TurboSquid

Fab pays 88%, TurboSquid pays 40 to 60%, identical asset, different shelf

6. price at \$79 and ship a new pack monthly

60 listings selling once a month each is \$56,880 gross, Fab leaves you about \$50k of that, TurboSquid about \$28k

the whole
